🗂 PROJECTS

Mechanic-Management ⊡
January 2021
Front-end & Back-end Developer
- Led a team of 5 that developed an application that helps individuals to check in and check out their vehicles in a mechanic workshop.
- Ensured that different components of the site comprising of Javascript, HTML, CSS, SCSS, Node.js & React were assigned to different individuals.

Gift-Fairy ⊡
November 2020
Front-end Developer & UI Designer
- Leveraged APIs from different companies to build an application to keep track of a gift wish list where an individual can sign up to create a wish list and then share that wish list via email to friends or family.
- As a team leader, I shortened the project timeline from two weeks to 10 days which allowed members to have more time to work on other individual projects.

Magic-Recipe-Randomizer ⊡
September 2020
Front-end & Back-end Developer
- Successfully passed ingredient and cocktail input variables to API URL to create a website that provides recipe recommendations personalized to an individual's tastes with available cocktail search alongside.
- Contributed to different components of the site using HTML/CSS, Javascript, Bulma, Jquery, Cocktail API, and spoonacular API.

🌐 SKILLS
